

## **Franciscan Health Dyer & Hammond Rehabilitation Services Unit**

### **Our Program**

Franciscan Health has a comprehensive 18-bed rehabilitation unit on the Hammond campus as well as a 12-bed rehabilitation unit on the Dyer campus.

### **Our Scope of Services**

Franciscan Health's Rehabilitation Units serve individuals who require inpatient acute rehabilitation due to significant functional/cognitive loss and require daily physician oversight and 24-hour rehabilitation nursing care due to complex care needs. Patients must be able to tolerate and benefit from a minimum of three hours of therapy (from two or more disciplines) for a minimum of five days per week and must have functional goals for such therapeutic intervention.

A patient who is unable to participate in three hours of therapy due to medical complications may still qualify for an inpatient rehabilitation stay so long as the patient meets the general admission criteria of requiring an inpatient stay, requires comprehensive rehabilitation services, and has the potential to improve function from these services.

The inpatient acute rehabilitation program is designed to meet the needs of adults with functional and or cognitive impairment and disability including, but not limited to, the following injuries or diseases:

Amputation	Orthopedic surgeries/injuries
Brain Injury	Neurological Diseases
Spinal Cord Injury	Stroke
Major multiple Trauma	Disuse Muscle Weakness

Our program does not currently serve persons who are: ventilator dependent, have severe behavioral or psychological problems, are unresponsive/comatose, or are under the age of eighteen.

The inpatient acute rehabilitation program provides care that is directed by a physiatrist. The attending Physician is supported by an interdisciplinary team of health care professionals, including physical therapists, occupational therapists, speech-language pathologists, psychologists, rehabilitation nurses, social work/case management services, dietary, and other specialty professionals, as appropriate.
